

FOR IMMEDIATE RELEASE:

REAL-TIME INVENTORY MANAGEMENT NOW ENHANCED WITH RECALL MANAGEMENT SERVICE

VUEMED and Noblis Announce Solution Interoperability

SEATTLE, WA and FALLS CHURCH, VA – April 29, 2009 – VUEMED, provider of the VueTrack inventory tracking and reporting system, and Noblis, provider of the RASMAS recall management service, announce an agreement to provide interoperability of their solutions, resulting in enhanced supply-chain and patient safety services to customers.

The integrated system will allow hospitals that manage expensive perishable medical supplies in specialty areas (such as cardiac catheterization, interventional radiology, electrophysiology, endoscopy and surgical specialties) through VueTrack to give their healthcare providers the ability to identify and remove recalled products as soon as they are announced.

"VueTrack is one of the few medical inventory tracking systems on the market capable of alerting hospitals to product recalls through the recording and management of individual products' lot numbers," stated Arnold Chazal, CEO of VUEMED. "Now, by integrating with the RASMAS recall management service, we will have the ability to do this in real time, greatly increasing our value proposition to our customers."

RASMAS delivers timely and actionable healthcare product recalls, comprehensive workflow capabilities, and access to a growing online community of healthcare professionals. Many leading hospitals utilize RASMAS web-based service to drive patient safety best practices, manage costs, and reduce exposure to product recall liability throughout the enterprise.

VueTrack's real time, web-reported analyses of inventory transactions provide the information needed by hospitals to avoid waste through expiration management, dynamically adjust inventory composition to physician preferences, reduce overall budget tied up in inventory, and to deliver immediate savings.

"We are thrilled to have this relationship and add VUEMED as another key partner in our efforts to extend the reach of real time recall service to all aspects of patient safety," said Mark Lay, RASMAS Program Director. "RASMAS is designed to drive best practices in recall management, and with VueTrack's barcode recognition and tracking technology interoperability, hospitals will have the ability to remove potentially harmful products much more efficiently and, thereby, improve patient safety with greater automation."

The VUEMED-Noblis relationship aims to deliver a comprehensive, user-friendly solution to hospitals looking to improve patient safety and care, and at the same time improve operational performance and generate significant savings.

About VUEMED

VUEMED (www.vuemed.com) is a healthcare services company whose inventory management tool, VueTrack, provides real-time tracking of medical products, devices and supplies. VueTrack is software as a service, and has been specifically designed to meet the needs of specialty hospital departments, including cardiac catheterization, interventional radiology, electrophysiology, endoscopy and surgical specialties. VueTrack is used by major medical centers throughout the United States.

About Noblis

Noblis (www.noblis.org) is a nonprofit science, technology and strategy organization that helps clients in the public and private sector solve complex scientific, systems, process, and infrastructure problems in ways that benefit the public. RASMAS (rasmus.noblis.org) is a web-based service that enables healthcare providers and suppliers to collaborate and respond to product recalls and alerts with dramatically increased speed, thus lowering administrative costs, mitigating legal risk, and most importantly, improving patient safety.
